3D Printing Workshop Reflection

Hello, my name is Jose Hernandez, my major is Engineering of Science/Civil Engineering I participate in this workshop as a part of First-Year Seminar class that I am currently taking, I go to college part time and work full time in retail.

The 3D printing workshop was a whole new experience and being part of this workshop I realize how important and related to my career this new advance in technology can be. I am a civil engineering student and there is a lot of design involved in my major, one of the main tools in Civil Engineering is the knowledge or use of AutoCAD and Revit necessary programs for blueprints design and a great compliment would be to learn 3D printing since the use of this new technology gives us access to physically have access to a different material to be used future projects before his edification. Th e use of 3D printing will open possibilities for all the job seekers, definitely is very important for students like us to have a better understanding of this technology in today education and in the global economy.

my participation in this workshop has had a great impact on my life as a student and future engineer now I will like to start a career as a material tester parallel to civil engineering to open all the possibilities to be qualified for better job opportunities. Being part of this event opens the door to better options in my life as a student I am really interested in learning and do more search about how to become a tech. I wish LaGuardia Community College can incorporate this program as a class to learn about his applications so we can be more prepared for the better job challenges, Personally, the only challenge that I faced in this event was the time the information provided was interesting but it was provided in a short amount of time, I really want to put my hands on the machine and learn how it works but I think this is going to be a reality once I start on my search I think the school should give access to students who want to learn the use of these machines of course under the right supervision.

Thank you so much for this learning experience.

sincerely

Jose Hernandez
